

**Tools required;**  
Mini Grinder, Table clamp, Wood sealer, Cloth

**Step 1** Using the template as a guide; trace the outline of the attached face template onto your piece of wood. By Adding your own creativity you can give your face carving a personally all of its own.

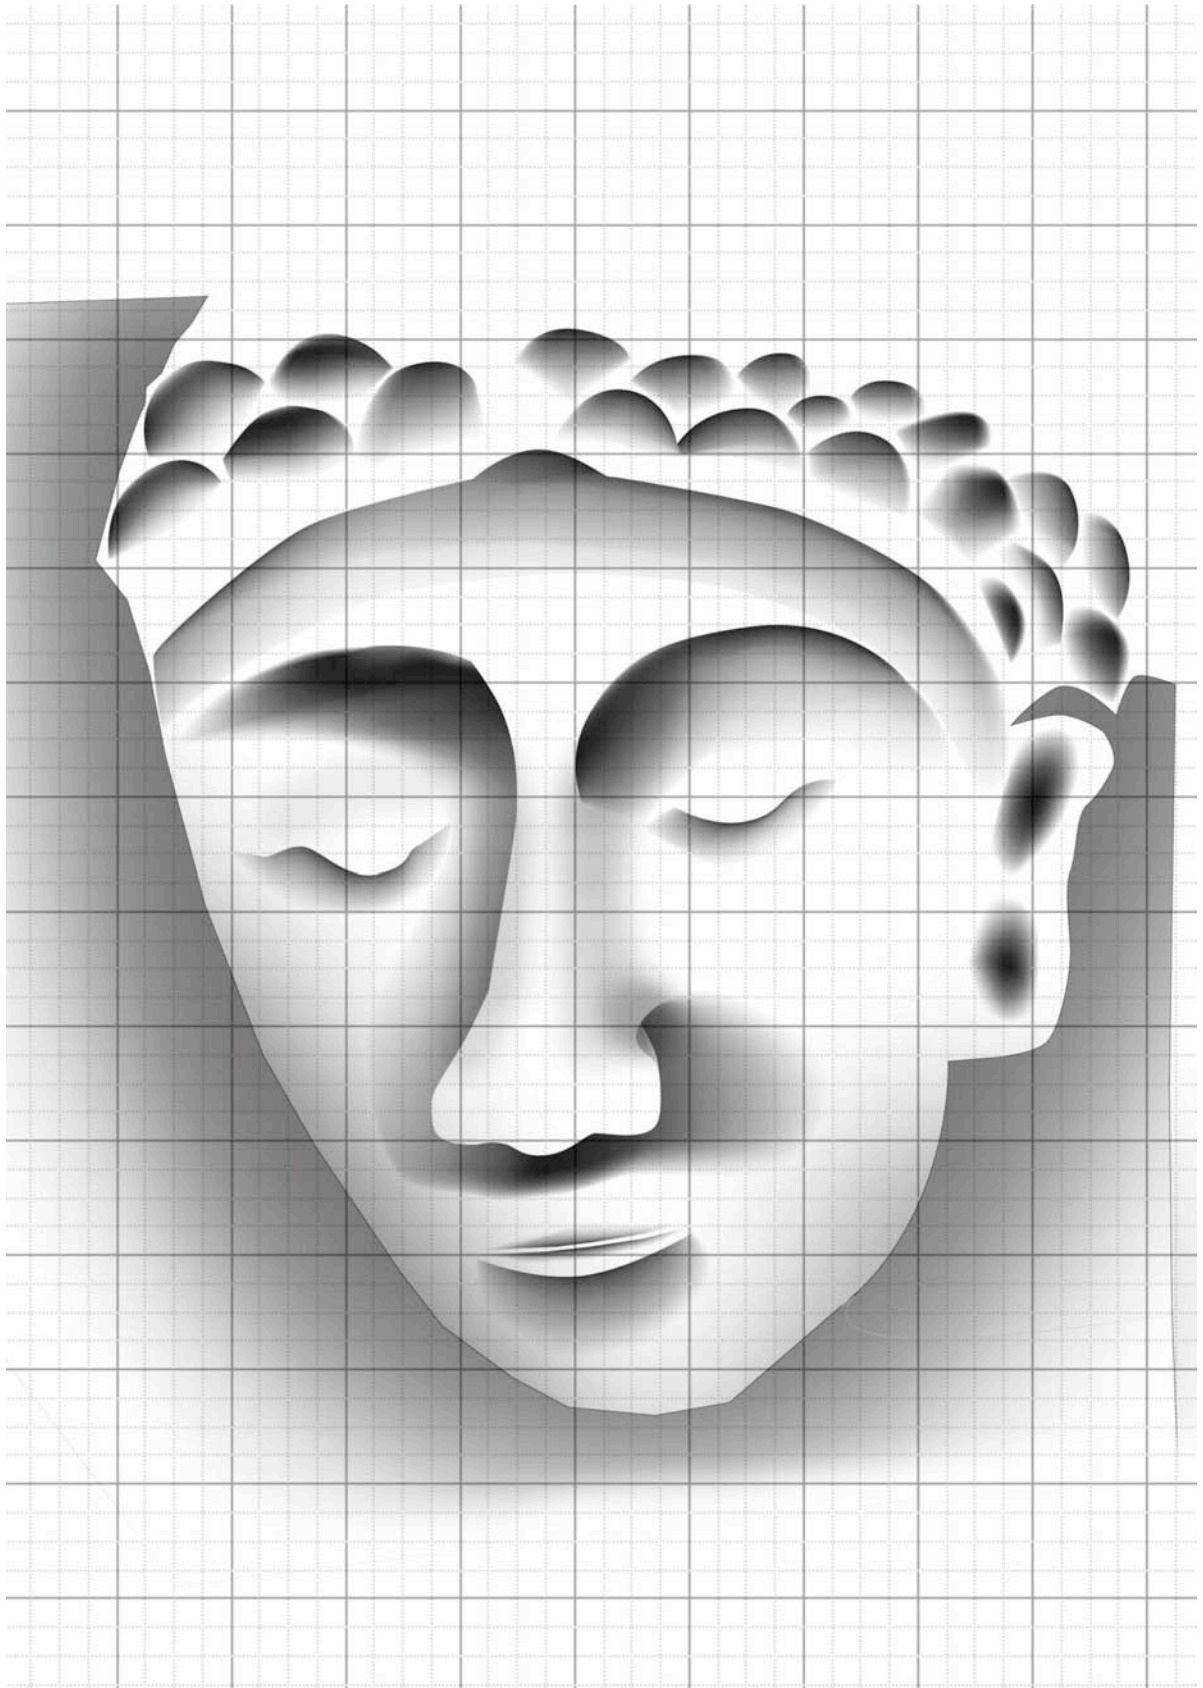

**Step 2** Use the Mini Grinder to following the traced outline clearing away and shaping your wood to create the face's main features. The darker sections of the template represent the depth of the carving.

**Step 3** Remove the Woodcarving Disk from the Mini Grinder and fit a sanding disk. Using the Sanding Dsk attachment, gently finish shaping and adjusting the features of your carved face until you are happy with the end result.

**Step 4** It's that simple! When you have completed your shaping we recommend you use a wood sealer to complete your project.
