CARVED WOOD - TATTOO DESIGN

TOOLS REQUIRED: A4 carbon copy tracing paper, Power Chisel, Timber (we used Jarrah), Table clamp, Cloth

Step 1 Print out any curved tattoo carving design template in A4 format. Cut a piece of Jarrah wood into suitable size for the tattoo design. Then tape a sheet of carbon paper between the printed design and the piece of wood. Carefully trace the tattoo design through the carbon paper onto the wood. After design is traced, remove paper and carbon paper.

Step 2 Secure the piece of wood and prepare your power chisel for action! Use safety glasses and ear protection.

Step 3 For this design we used the PCHS013 18mm x 90° V gouge. Chisel out the wood using the traced design as a guideline for where to chisel.

Step 4 Use an oil to finish off your carved design. Oil is used to bring out the beautiful natural colours of the Jarrah and will protect your work. To enhance the contrast of the finished product you can apply Oil before chiselling.

Using the Power Chisel, your imagination and a couple of hours work, you can create a carved tattoo design any woodworker would be proud of.
